

Agenda 2 for Tutorial

2021 S1 ANU Techlaunch Project - Cinefly

Dare: 23rd Mar 2021

In this tutorial, our team would like to talk about 3 issues. They are firstly the progress we made in the last week, the plan we need to do in this week and finally we would like to ask some questions about Audit 2 which will come in the next week.

1. First, I will talk about the progress we made last week. At the beginning of last week, our team had a big problem, that is, we could not get in touch with the client. As some technical details of the project have not yet been determined, we are unable to continue our work. After the tutorial last week, we listened to tutor's opinions and contacted the course convener. Then we finally received a reply from the client on this Monday. This email answers some of our questions, but there are still some things we feel we need to continue to communicate with the client. We have suggested meeting with the client every Tuesday, but we have not gotten his confirmation yet. We believe that getting in touch with the client is our biggest progress last week.

In addition, we re-created most of our landing page and repo based on tutor and shadow team feedbacks last week. They now look neater and more standardized. We also improved our project management last week, and we think they have now reached a satisfactory level.

This is the main work we did last week.

2. Next, I want to talk about our main work this week. Although there were some technical details mentioned in the client's email, we still feel that this is not enough. So, we need to continue to ask customers for more details.

The only thing we can be sure is that the client will not give us technical support for the project. He will give us some resources but will not give us technical constraints. So, we need to do some research on our own to determine how to achieve his needs. This means that at this stage we do not have to worry about whether our deliverables, that is, an algorithm, can be integrated with the client's app. So, this week we are going to review some academic papers, collect and organize useful information.

3. Finally, we want to ask about Audit 2. According to the situation we just mentioned, we plan to mainly show our research results and project management progress in Audit 2. Because we do not have time to start the actual coding part. We are not very sure whether this can meet the needs of Audit 2.
